Critical Care Nursing: A Holistic Approach, Eleventh Edition

Essentials of Critical Care Nursing: A Holistic Approach provides a solid, focused introduction to the discipline of critical care nursing. In writing the text, we assumed a basic knowledge of medical – surgical nursing, anatomy and physiology, pathophysiology, and assessment. However, these areas are reviewed as needed within the context of specific discussions, focusing specifically on the needs of the patient in a critical care setting.

Essentials of Critical Care Nursing PDF - A Holistic Approach

Focusing on preparing students to offer optimal care for critically ill patients and their families, this updated Critical Care Nursing: A Holistic Approach, 11th Edition, (PDF) of Morton ' s classic text combines the latest research in nursing and health care education while providing concise, clear writing; outstanding illustrations and photographs; and a holistic approach to the complexities of critical care nursing. By providing theory and principles within the context of practical ...

Critical Care Nursing: A Holistic Approach (11th Edition ...

Second, the critical care nurse must remain cognizant that technology cannot care for the whole being who is in a health care crisis. Holistic caring, the being-with, the empathy, the interconnected experience of need and response within a nursing theoretical framework is the nurse's art. It is this art of caring that is the qualifier of life. It is the balance of technological competency with the art of nursing that promotes adaptations in health crises.

Holistic Care in the Critical Care Setting: Application of ...

Holistic nursing care involves healing the mind, body, and soul of our patients. It involves thinking about and assisting patients with the effects of illness on the body, mind, emotions, spirituality, religion, and personal relationships. Holistic care also involves taking into consideration social and cultural differences and preferences.

Helen McKenna sits down with Marvin Rees, the Mayor of Bristol, to explore his approach to place-based leadership, the NHS ' s role as a ' place-shaper ' and the city ' s experience of Covid-19. The second wave of Covid-19 offers new as well as ongoing challenges for the health and care system ...

This completely revised tenth edition of this clinical text is equally useful to nursing students and practising critical care nurses. New information on conscious sedation, management of agitated delirium and AICD have been added.

A classic in its field, this popular text provides clinical coverage of critical care nursing, with an emphasis on holism in practice. Beginning with the psychosocial concepts of care, the text progresses through assessment and management of a variety of disorders. Now under the head authorship of Tricia Morton, Critical Care Nursing maintains its popular holistic approach to the complexities of adult health and critical care. The Eighth Edition is now in full-color, and has been thoroughly updated to reflect recent changes and advances in critical care nursing. A CD-ROM in the back of this edition has common Critical Care Drug Monographs, Crisis Values of Lab Tests, Critical Care Nursing Procedures, Animations, and comprehensive critical care exams.

Related work: Critical care nursing / [edited by] Patricia Gonce Morton, Dorrie K. Fontaine. 9th ed. c2009.

This book is organized into five parts, the first two of which cover areas applicable to all critical care patients, including the patient's and family's experience, education, pain management, ethical and legal issues, and the rewards and challenges of critical care nursing. The third part addresses specific populations, including pediatric patients, pregnant women, older adults, and postanesthesia patients, as well as interfacility transport. The balance of the book is arranged by body systems and concludes with multisystem problems. This is the seventh edition of a text first published in 1973 and last published in 1994. The purpose is to present current, comprehensive, and practical information built on a holistic perspective of care in which the patient is the core of nursing practice. This book meets a need for educating students and nurses in the critical care environment. The editors' objective of providing a framework for focusing on patient responses in the critical care environment is met. This book is intended for students in critical care, educators, and clinicians. This edition is also tailored to meet the needs of patients. The editors are excellent authorities in critical care nursing. All three are practitioners, and one is both practitioner and educator. The contributors and reviewers are critical care experts. The illustrations are used best to understand critical care technology. The graphics used for anatomy, physiology, and patient assessment add to the usefulness of the text. The references are pertinent and current, but certain specialty content would need to be updated by the reader (e.g., medication protocols for CHF). The use of color in the text is managed carefully to guide and not overpower the reader. The 1997 ACLS Guidelines are in Appendix 1. The Answer Key to Study Questions appears in Appendix 2. Anatomy and physiology, patient assessment and clinical management, nursing research, collaborative plans of care, teaching, and home care issues are some of the innovations presented. One strength of book is how it addresses the changes associated with aging and the needs of the older adult. Aging concerns are covered in one chapter and are highlighted throughout the text. This edition provides current information that makes the previous edition out of date. I would recommend this text for beginning critical care nurses and for undergraduate nursing students for its coverage of advanced pathophysiological concepts.

The third edition of the best-selling Critical Care Nursing offers readers a fully up-to-date, evidence-based guide to the science and practice of nursing the critically ill patient. Organised into 16 chapters, this edition covers all essential aspects of critical care nursing, from how to manage and monitor specific problems within organ systems, to how to provide sympathetic and compassionate care. A new chapter on 'Managing major incidents and preparing for pandemics' has been introduced with an insight to this crucial aspect of contemporary global healthcare. Written by a team of experienced nurses, this textbook supports staff working across the continuum of critical care to deliver safe, knowledgeable care that is rooted in a strong clinical, evidence base.
