Haynes offers the best coverage for cars, trucks, vans, SUVs and motorcycles on the market today. Each manual contains easy to follow step-by-step instructions linked to hundreds of photographs and illustrations. Included in every manual: troubleshooting section to help identify specific problems; tips that give valuable short cuts to make the job easier and eliminate the need for special tools; notes, cautions and warnings for the home mechanic; color spark plug diagnosis and an easy to use index.

Looks at the combustion basics of fuel injection engines and offers information on such topics as VE equation, airflow estimation, setups and calibration, creating timing maps, and auxiliary output controls.

Bridging the fields of conservation, art history, and museum curating, this volume contains the principal papers from an international symposium titled "Historical Painting Techniques, Materials, and Studio Practice" at the University of Leiden in Amsterdam, Netherlands, from June 26 to 29, 1995. The symposium—designed for art historians, conservators, conservation scientists, and museum curators worldwide—was organized by the Department of Art History at the University of Leiden and the Art History Department of the Central Research Laboratory for Objects of Art and Science in Amsterdam. Twenty-five contributors representing museums and conservation institutions throughout the world provide recent research on historical painting techniques, including wall painting and polychrome sculpture. Topics cover the latest art historical research and scientific analyses of original techniques and materials, as well as historical sources, such as medieval treatises and descriptions of painting techniques in historical literature. Chapters include the painting methods of Rembrandt and Vermeer, Dutch 17th-century landscape painting, wall paintings in English churches, Chinese paintings on paper and canvas, and Tibetan thangkas. Color plates and black-and-white photographs illustrate works from the Middle Ages to the 20th century.

Author Trenton McGee, 4x4 suspension expert and host of Outdoor Channels Off-Road Adventures, explains 4x4 suspension systems in an easy-to-understand manner. He gets specific on types of suspensions available from all the major manufacturers including Jeep, Toyota, Ford, Chevy, and Dodge. He goes into a great level of detail on every different model, including early and modern model systems.

Big Cats opens with "Charlotte," in which a young girl with a broken pelvis spies on her voluptuous neighbor during a long, hot summer night, setting the tone of irrepressible curiosity and yearning that is evident throughout the collection. In "Get Away from Me, David," a bank manager tries to overcome his haunted past as he deals with the aftermath of a minor earthquake and the body of a customer who died in the lobby. "Big Cats" pits two teenage girls against each other in an escalating catfight at the zoo where they work, culminating in a blowout in front of the lion cage.

Extracting maximum torque and horsepower from engines is an art as well as a science. David Vizard is an engineer and more aptly an engine building artist who guides the reader through all the aspects of power production and high-performance engine building. His proven high-performance engine building methods and techniques are revealed in this all-new edition of How to Build Horsepower. Vizard goes into extreme depth and detail for drawing maximum performance from any automotive engine. The production of power is covered from the most logical point from the air entering the engine all the way to spent gasses leaving through the exhaust. Explained is how to optimize all the components in between, such as selecting heads for maximum flow or port heads for superior power output, ideal valvetrain components, realizing the ideal rocker arm ratios for a particular application, secrets for selecting the best cam, and giving unique insight into all facets of cam performance. In addition, he covers how to select and setup superchargers, nitrous oxide, ignition and other vital aspects of high-performance engine building.

Every Haynes manual is based on a complete teardown and rebuild, contains hundreds of "hands-on" photos tied to step-by-step instructions, and is thorough enough to help anyone from a do-it-your-selfer to a professional.

Frederik Drescher addresses the timing of non-mandatory insolvency filings based on threatening illiquidity ( § 18 InsO) with the aim of a company's restructuring as an agency problem between owners and management. The hypothesis of a tendency towards delayed insolvency filings, which was developed using a decision model, is experimentally confirmed. Moreover, the author analyzes different incentive instruments potentially leading to earlier insolvency filings.

How to Build Horsepower - Volume 1 gives you an inside look at the techniques expert engine builder David Vizard uses to build horsepower in engines from 4 cylinders to big-block V-8s. With over 40 years of experience in tracking down the subtle factors that add up to big power improvements, David explains how you can get these same results in your workshop. This volume covers major engine components including: the short block, cylinder heads, camshafts, induction, carburetion, ignition, headers, and exhaust systems. Get the most from any engine with this clearly-written book.
