We can use permutations and combinations to help us answer more complex probability questions. ... We could either compute  $10 \times 9 \times 8 \times 7$ , or notice that this is the same as the permutation  $10 P 4 = 5040$ . The probability of no repeated digits is the number of 4 digit PINs with no repeated digits divided by the total number of 4 digit PINs ...

Combinations:  ${}^7C_3$  In our list of 210 sets of 3 professors, with order mattering, each set of three profs is counted  $3! = 6$  times. The number of distinct combinations of 3 professors is  $\frac{7 \cdot 6 \cdot 5}{3 \cdot 2 \cdot 1} = \frac{7 \cdot 6 \cdot 5}{6} = 7 \cdot 5 = 35$ .  ${}^7C_3$  is the number combinations of 3 objects chosen from a set of 7. Of seven ...

English we use the word "combination" loosely, without thinking if the order of things is important. In other words: "My fruit salad is a combination of apples, grapes and bananas" We don't care what order the fruits are in, they could also be "bananas, grapes and apples" or "grapes, apples and bananas", its the same fruit salad.

## ~~Combinations and Permutations~~ — MATH

Permutations and combinations are part of a branch of mathematics called combinatorics, which involves studying finite, discrete structures. Permutations are specific selections of elements within a set where the order in which the elements are arranged is important, while combinations involve the selection of elements without regard for order.

This is particularly true for some probability problems. Suppose we are given a total of  $n$  distinct objects and want to select  $r$  of them. This touches directly on an area of mathematics known as combinatorics, which is the study of counting. Two of the main ways to count these  $r$  objects from  $n$  elements are called permutations and combinations. These concepts are closely related to one another and easily
